

MY PROOF STATEMENT (locked):

"I break down web application vulnerabilities such as XSS and SQL injection, working in environments like OWASP Juice Shop and tools including Kali Linux, until I can explain exactly how and why they work — using AI as a reasoning partner to test ideas, challenge assumptions, and refine my analysis. For a hiring manager evaluating entry-level security talent: this is how I analyze security problems before you decide whether to interview me. Email me about internship or entry-level opportunities."

MY ONE HONEST LINE (locked):

"A résumé claims 'security research' in one line; it can't show the reasoning trail — where I got stuck, how AI helped me test an idea, what I ruled out before I found the real vulnerability. The write-ups are that trail."
