

How I Add the Next Portfolio Case

A concrete system for keeping the portfolio current through the next real case study.

NEXT CASE	ShiftWise — Employee Scheduling System
CASE SHAPE	Problem → What I did → What came of it
REMINDER	September 11, 2026 · 11:59 PM
BUILD CONTEXT	Existing Claude Project: FlyRank Portfolio Build Workspace

Submission note: this document describes the repeatable process and evidence for the next case. The ShiftWise case itself is planned for a future portfolio update; it is not represented as already published.

01 · HOW TO ADD THE NEXT CASE

A repeatable case-study process

My next case study will be added to the existing Work section of my portfolio. I will reuse the existing case-study structure rather than creating a separate page system.

The three-beat structure

- | | |
|----|--|
| 01 | Problem
What needed to be solved, and why the project mattered. |
| 02 | What I did
The decisions, process, tools, implementation, and evidence that show how I approached the problem. |
| 03 | What came of it
The measurable or observable result, final outcome, lessons, or evidence produced by the work. |

Process for adding a case

1. Choose a real completed piece of work.
2. Gather the strongest evidence: screenshots, repository, implementation details, and relevant outcomes.
3. Write the case using Problem → What I did → What came of it.
4. Adapt the content to the existing portfolio case-study structure.
5. Add the case to the existing Work section.
6. Reuse the existing visual identity instead of creating a new one: Space Grotesk for headings and Inter for body text; Deep Burgundy #6B1F2A, Ink #171717, and Warm White #F7F5F2.
7. Check the page, links, screenshots, responsiveness, and content.
8. Deploy the updated portfolio and verify the live case.

The portfolio uses a reusable Next.js/TypeScript structure, so the goal is to extend the existing system rather than rebuild the portfolio for every new project.

02 · NEXT PIECE + REMINDER

ShiftWise — Employee Scheduling System

This is the next real piece of work I intend to add to the portfolio. The project is a full-stack employee scheduling system with a React frontend, C++ backend, and PostgreSQL database. Its documented functionality includes JWT authentication, role-based access, staff management, scheduling, leave management, announcements, conflict detection, and draft/published shift states.

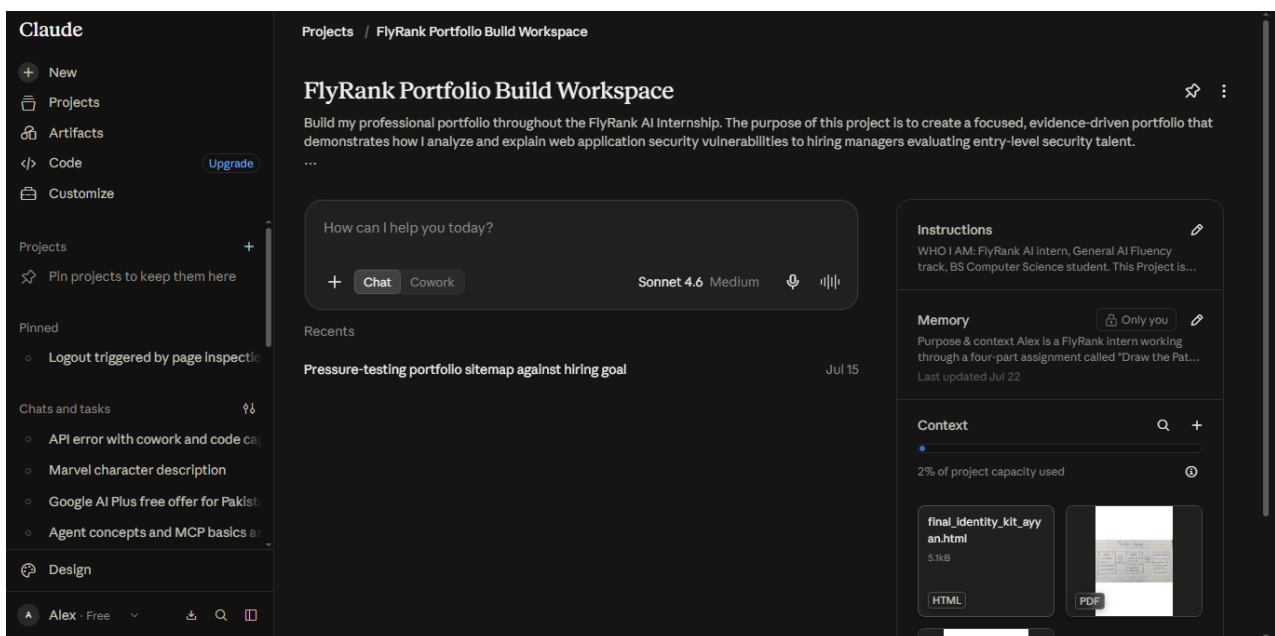

For the future portfolio case, the project will be framed using the same three beats: Problem → What I did → What came of it.

Concrete reminder

Reminder set: September 11, 2026 at 11:59 PM

Purpose: Add the ShiftWise case study to the portfolio using the established three-beat structure.

Evidence of the reminder / build context

The supplied screenshot evidences the existing Claude Project, “FlyRank Portfolio Build Workspace,” which contains the portfolio's working context. It is the preserved project context to continue using for future cases.

03 · PRESERVED BUILD CONTEXT

Existing Claude Project

The existing Claude Project is FlyRank Portfolio Build Workspace. The supplied evidence shows that this project remains available and is being retained as the working context for the portfolio.

- Voice and purpose: the project is explicitly set up for building the professional portfolio through the FlyRank AI Internship.
- Identity context: the existing project includes the portfolio identity material, including the final identity kit.
- Future workflow: the next case should continue from this context rather than rebuilding the portfolio brief and identity system from scratch.

Reviewer contextual notes

This capstone establishes a repeatable process for keeping the portfolio current rather than treating the initial portfolio as a finished artifact.

The next planned case is ShiftWise — Employee Scheduling System. It will be added to the existing Work section using the same three-beat structure: Problem → What I did → What came of it.

The process deliberately reuses the portfolio's existing case-study structure, Next.js/TypeScript implementation, and established identity system instead of creating a new structure for every project.

A concrete reminder has been set for September 11, 2026 at 11:59 PM to prompt the addition of the ShiftWise case.

The existing Claude Project is being retained so future portfolio updates can continue from the established portfolio context rather than rebuilding that context from scratch.

Requirement check

Assignment requirement	Evidence in this submission
Concrete how-to-add note	Page 2: location, three-beat structure, and 8-step process.
Specific next piece + real reminder	Page 3: ShiftWise + September 11, 2026 at 11:59 PM + evidence screenshot.
Preserved Claude Project context	Page 3–4: supplied screenshot and explanation of the existing Claude Project.
