

Portfolio Foundation

Judgment applied to content, visual identity, and portfolio imagery.

Muhammad Ayyan Hassan

This document consolidates the Week 3 portfolio decisions into one coherent foundation. It uses the previously completed Through-Line, Identity Kit, and image-curation work as source material; it does not invent new portfolio claims or replace documented evidence.

CORE PRINCIPLE

The design frames the work; it never upstages it. Evidence beats decoration, and judgment decides what earns a place.

Deliverables covered

- 01 Through-Line · one-line claim, content map, CTA ladder, still-need-to-gather list
- 02 Identity Kit · typography, palette, mark, style note
- 03 Image Curation · final image set, selection logic, rejection/cut rationale

Map Content & CTAs

One-line claim

I find and exploit vulnerabilities in web applications, document the evidence, and explain why they matter — using AI as an analytical partner, not a shortcut.

Content map

Page	Structure
HOME	Purpose: Establish the claim and move the visitor toward evidence. Sections: Proof statement → Who I am → Featured work preview (XSS leads; SQL injection follows) → CTA area. Strongest proof: XSS leads because the documented failed-first-attempt → successful-pivot story demonstrates reasoning under constraint. CTA: See the work → Work.
WORK	Purpose: Deliver the documented evidence that makes the claim credible. Sections: Brief framing → XSS case → SQL injection case → security write-ups/supporting context. Case structure: Scope → Method → Findings → Impact / Why it matters. CTA: Interested? Let's talk → About / Contact.
ABOUT / CONTACT	Purpose: Give a convinced visitor context and the lowest-friction path to contact. Sections: Who I am / background → Email CTA → GitHub → LinkedIn → Resume. Primary CTA: Email me about internship or entry-level opportunities. Supporting links: visually subordinate to email.

CTA ladder

Page	CTA	Next step
Home	See the work	Work / evidence
Work	Interested? Let's talk	About / Contact
About / Contact	Email me about internship or entry-level opportunities	Final action

Through-line: Understand the claim → See the proof → Become convinced → Contact me.

Still Need to Gather

This list is intentionally honest. Missing or unverified evidence is documented as future build work rather than presented as completed proof.

Proof item	Status	Action
XSS case study write-up	Ready	Confirm final version.
SQL injection case study write-up	Ready	Confirm final version.
XSS exploitation screenshots	Needs verification	Confirm successful img onerror execution is clearly evidenced.
SQLi exploitation screenshots	Needs verification	Confirm authentication-bypass evidence is clearly captured.
GitHub repository	Missing	Confirm or create the portfolio-appropriate repository.
Live demo	Not currently available	Do not claim one unless available.
Quantified impact / before-after numbers	Missing	No documented metrics currently available.
Testimonial / reference	Missing	No documented testimonial currently available.
Professional photo	Needs verification	Confirm portfolio-ready real photo.
Current resume PDF	Needs verification	Confirm current portfolio-ready version.
FlyRank internship work samples	In progress	Include only finished, documented work.
SafeLine attack-log evidence	Needs verification	Verify evidence before including it.

Build-week rule

Do not convert an unverified item into a portfolio claim. Verify evidence first; if it does not exist, leave it out.

Decide Once

Typography

Font	Use
Space Grotesk	Headings · name · labels · monogram
Inter	Body · supporting text · captions

Palette

Color	Hex	Role
Deep Burgundy	#6B1F2A	Accent · identity
Ink	#171717	Text · base
Warm White	#F7F5F2	Background

Mark

Primary mark: AH Favicon: AH

Style note

Typography: Space Grotesk for headings and Inter for body; Deep Burgundy #6B1F2A, Ink #171717, and Warm White #F7F5F2 form the complete palette.

Mood: Quietly technical and deliberate, with typography, spacing, and restraint carrying the visual identity.

Application rule

Use typography, spacing, and restraint to create hierarchy. The visual system should make the evidence easier to read, never compete with it.

Kill Your Darlings

The portfolio does not need more images. It needs the right images.

Final keeper set

#	Asset	Source	Decision	Why it earns its place
01	Homepage hero / connective visual	AI-generated	KEEP	Atmospheric support only; restrained texture, no fake security scene or invented evidence.
02	SafeLine attack log	Real capture	KEEP	Compact, direct security proof from the actual work.
03	SQLi WAF block detail	Real capture	KEEP	Direct evidence of SQL injection detection / denial.
04	XSS WAF block detail	Real capture	KEEP	Direct evidence of XSS detection / denial.
05	XSS payload capture	Real capture	KEEP	Shows the actual test input used in the Juice Shop review flow.
06	SafeLine statistics	Real capture	KEEP	Broader operational / methodological context.
07	About / personal photograph	Real photo	KEEP	The portfolio owner is represented by a real photograph, not an AI substitute.

Curation rules applied

- Evidence beats illustration: actual project claims are represented by actual captures.
- People stay real: the About image is a real photograph, not an AI substitute.
- AI stays connective: the generated texture adds atmosphere without pretending to document work.
- Restraint is a filter: if a visual competes with the evidence, it does not earn a place.

Rejected / Cut

R1 · Candidate B — REJECTED

Too visually dominant and decorative; it competes with the portfolio's actual evidence and weakens readability. The quieter Candidate A better preserves the deliberate technical character.

R2 · Cleared XSS field screenshot — CUT

Redundant secondary confirmation. The SafeLine XSS block event communicates the security outcome more clearly and gives the final set a tighter evidence hierarchy.

Final curation principle

REAL CAPTURE → security evidence. REAL PHOTO → personal identity / About. AI CONNECTIVE VISUAL → homepage atmosphere only. REJECTED / CUT → decorative or redundant visuals removed.

Final requirement audit

Requirement	Status
One-line claim	PASS
Content map	PASS
Ordered sections	PASS
Strongest work leads	PASS
Named CTA per page	PASS
CTA ladder	PASS
Honest gather-list	PASS
Typography + palette	PASS
Logo / favicon	PASS
Two-line style note	PASS
Final image set decisions	PASS
Rejection / cut rationale	PASS

Submission note

This PDF is the consolidated Week 3 portfolio foundation. The seven image assets are documented by the previously completed curation record; their actual image files should be uploaded separately only if the portal asks for the underlying files. This document does not claim that an unverified image or proof item exists.
