ASSIGNMENT

FL-01 · AI Workflow Audit

01 Workflow Audit

#	Task (recurring, weekly)	Classification	Rationale
1	Writing/reviewing code for FlyRank ML track assignments	Collaborate with AI	Need AI for speed on boilerplate, but modeling logic/decisions have to be mine or I don't actually learn anything
2	Writing FlyRank General AI Fluency deliverables	Collaborate with AI	Content has to be honest and mine; AI helps with structure and speed, not substance
3	Building UI mockups for HA Commerce Hub	Collaborate with AI	AI tools speed up iteration, but design decisions and client-facing judgment stay mine
4	Attending HA Commerce Hub meetings	Just me	Can't delegate presence, listening, or real-time judgment in a meeting
5	Frontend implementation work (HTML/CSS/JS/React) for HA Commerce Hub	Collaborate with AI	AI drafts components fast, but I own correctness, review, and what actually ships
6	Going through Anthropic Academy course modules	Collaborate with AI	I do the actual learning and every exercise myself, but I use AI to unpack concepts I get stuck on
7	Government Python course modules/exercises	Just me	Skill-building, not output-producing — the point is I do the reps
8	Web penetration & hacking government course	Just me	Security skills specifically require hands-on solving, not AI-generated answers
9	Cisco NetAcad cybersecurity intro course	Just me	Same reasoning as above
10	Building "Shift-wise" project — coding	Collaborate with AI	Real dev work; AI accelerates but architecture/decisions stay mine
11	Building "Shift-wise" project — planning/architecture	Just me	Product and architecture decisions are the actual skill I'm building
12	Building the Jarvis-style assistant — coding	Collaborate with AI	Same logic as Shift-wise
13	Researching APIs/tools for the Jarvis project	Delegate to AI with review	Low-risk to delegate; I verify accuracy before trusting it
14	Tracking workouts and meals	Delegate to AI with review	AI maintains the log/plan; I review and adjust — low stakes
15	Scheduling/prioritizing my week across all commitments	Collaborate with AI	AI helps structure priority, but I decide what actually matters

02 Three Target Tasks — Success Definitions

1 FlyRank ML Assignments

Done well means:

- I can explain and defend the core reasoning behind at least 80% of what I submit — not just that it runs, but why it's built that way.
- Correctness is checked before submission (tests pass / output verified, not just "looks right").
- Submitted by the assignment deadline.
- Reviewer feedback requires no more than minor revisions, not a rebuild.

2 Frontend Implementation (HA Commerce Hub)

Done well means:

- I can explain and defend the structure and choices behind at least 80% of what I build.
- Correctness means it matches the design spec/mockup with no visual bugs across the screen sizes I test.
- Delivered by the sprint/task deadline.
- Feedback from whoever reviews it requires only minor tweaks, not a rebuild.

3 Anthropic Academy Coursework

Done well means:

- All 20 enrolled courses completed before university reopens in September.
- Each course genuinely understood — not speed-run — meaning I can explain the core concept.
- Every recommended exercise for each course completed, not skipped.
